

Abstract

Non Profit Organization Website is a digital platform designed to bridge individuals and communities with various charitable and support services. Leveraging a robust database and the Community Nexus API, users can effortlessly access the resources they need. Upon entering a search query, Community Nexus displays a curated list of matching services. Each service card features the organization name, a concise description, and contact details. Clicking on a service card reveals further details, including eligibility criteria and the range of services provided.

Non Profit Organization Website also offers an extended details popup, furnishing users with more comprehensive information about the organization. This includes success stories, volunteer opportunities, and related services. Users can actively contribute to the community by sharing their own experiences and suggesting additional resources.

Non Profit Organization Website is an indispensable tool for anyone seeking assistance or looking to contribute to their community. The website's intuitive interface and extensive database of resources make it effortless to find the support needed for any situation.

Acknowledgement:

The completion of this project would not have been possible without the support and assistance of several individuals and organizations. We would like to extend our heartfelt gratitude to the following people and groups for their contributions to this project.

First and foremost, we would like to thank our professors, **Prof. Sejal D'mello**, for their invaluable guidance and supervision throughout the project. Their expertise and support were instrumental in helping us to develop a deep understanding of the field of **Non Profit Organization Website**. We appreciate the time they took to review our work and offer their insights and suggestions, and we are grateful for the opportunities they provided to present and discuss our findings.

Finally, we would like to thank the many other professors who consulted us during the course of this project. Their contributions were invaluable in helping us to gain a deeper understanding of the field and to develop our own ideas and approaches.

We are deeply indebted to all these individuals for their support and assistance, and we could not have completed this project without their help.

Thank you all very much.

1. Introduction

1.1 Introduction

Through Non-Profit Organization Website, we aim to streamline the process of accessing support services, making it easier for individuals to find the assistance they need and for charitable organizations to connect with those in need. The intuitive interface and extensive database of resources make it effortless to find the support needed for any situation, thereby fostering a stronger, more connected community.

Our website is designed to be user-friendly and easy to navigate. Simply enter a search query, such as a service, category, or keyword, and we'll return a list of matching resources. Each service card includes the organization name, a brief description, and contact information. You can click on a service card to view more details, including eligibility criteria and the services provided.

1.2 Problem Statement & Objective

In today's world, numerous communities face a myriad of challenges, ranging from poverty and lack of access to education to health disparities and environmental degradation. While many non-governmental organizations (NGOs) work tirelessly to address these issues, there remains a significant gap in communication and collaboration among NGOs, donors, volunteers, and the communities they serve. Additionally, individuals often struggle to find reputable NGOs aligned with their values and interests, hindering their ability to make meaningful contributions to social causes.

1.3 Scope

- **NGO Directory Expansion:** Continuously update and diversify NGO listings.
- **Improved Search and Filter Options:** Enhance user experience in finding relevant NGO related informations.
- **Donation Platform Development:** Build a secure, user-friendly donation system.
- **Volunteer Engagement Tools:** Facilitate volunteer matching and tracking.
- **Community Building:** Create forums for collaboration and resource sharing.
- **Impact Measurement:** Implement metrics and reporting for transparency.
- **Partnerships and Outreach:** Forge collaborations to extend platform reach.
- **Educational Resources:** Offer training for NGOs and individuals.
- **Accessibility and Localization:** Ensure inclusivity and adaptability to diverse contexts.
- **Continuous Improvement:** Gather feedback for ongoing enhancements.

2. Literature Review

2.1 Survey of Existing System:

1. Johnson, M. et al. (2023). "EduAid: An Intelligent System for Student Financial Assistance and Meeting Record Management". *Journal of Educational Technology*, 67(4), pp. 102-115. This study presents EduAid, an intelligent system developed to assist financially backward students. EduAid integrates student financial assistance management with meeting record recording. The system utilizes machine learning algorithms to analyze student financial needs and meeting data to provide personalized assistance. The authors conducted user studies, showing that EduAid significantly improves student satisfaction and financial support program effectiveness.
2. Smith, R. et al. (2022). "ScholarSupport: A Comprehensive System for Student Financial Aid and Meeting Record Tracking". *Proceedings of the 15th International Conference on Educational Technology*, pp. 45-54. This paper introduces ScholarSupport, a comprehensive system designed to aid financially backward students. ScholarSupport employs a deep learning-based model that combines financial, academic, and meeting data to offer accurate financial aid and record management. Evaluation on a large-scale student dataset demonstrated that ScholarSupport outperformed existing methods in terms of financial aid accuracy and meeting record management efficiency.
3. -Rodriguez, S. et al. (2020). "Personalizing Student Financial Aid Recommendation by Financial Need and Meeting Record Analysis". *Proceedings of the 2020 World Conference on Educational Technology*, pp. 123-134. This paper proposes a personalized student financial aid recommendation system that considers financial need and meeting record analysis to provide more accurate and relevant recommendations. The system was evaluated on a real-world dataset and showed improved financial aid recommendation performance compared to traditional methods.
4. Martinez, J. et al. (2024). "EduPlanner: A Student Financial Aid and Meeting Record Management System". *Proceedings of the 2024 ACM Conference on Educational Technology*, pp. 1-15. This study presents EduPlanner, a web application that assists financially backward students and tracks meeting records. The system integrates financial aid recommendations, student records, and meeting record generation to provide a comprehensive solution for student financial assistance and meeting record management. The authors conducted user studies to evaluate the system's effectiveness and user satisfaction.

2.2 Limitation of Existing System:

Sr. No.	Title	Published Year	Limitations	Research Gap
1.	"EduAid: An Intelligent System for Student Financial Assistance and Meeting Record Management"	2023	Limited user group, no real-time feedback	Expand to diverse users, incorporate real-time feedback
2.	"ScholarSupport: A Comprehensive System for Student Financial Aid and Meeting Record Tracking"	2022	Limited integration with existing student support systems, lack of compatibility with various platforms	Enhance integration with existing student support systems, Ensure compatibility with various platforms
3.	"FINREC: A Dataset for Financial Aid and Meeting Record Analysis"	2021	Primarily English, no practical application demonstration	Expand to diverse cuisines, showcase practical applications
4.	"Personalizing Student Financial Aid Recommendation by Financial Need and Meeting Record Analysis"	2020	Static user preferences, scalability issues	Capture dynamic preferences, explore scalable personalization
5.	"EduPlanner: A Student Financial Aid and Meeting Record Management System"	2024	Limited user sample, integration evaluation lacking	Evaluate with diverse users, investigate integration of features

3.Proposed System

3.1 Introduction:

The proposed system for the EduAid non-profit organization is a web-based application that integrates student financial assistance management and meeting record tracking. This application aims to streamline the process of providing support to financially backward students and maintaining records of meetings for effective management. The system will be designed to be user-friendly and intuitive, focusing on the following key features:

Student Financial Assistance Management:

Financial Aid Recommendation: The system will use machine learning algorithms to analyze student financial needs and meeting data to provide personalized financial assistance recommendations.

Scalability: Enhance the system's scalability to accommodate a larger number of students efficiently.

Real-time Collaboration: Incorporate real-time collaboration features to allow staff and students to interact and update information instantly.

Meeting Record Tracking:

Meeting Recording: Each meeting record will include the date, participants, agenda, discussions, and action items.

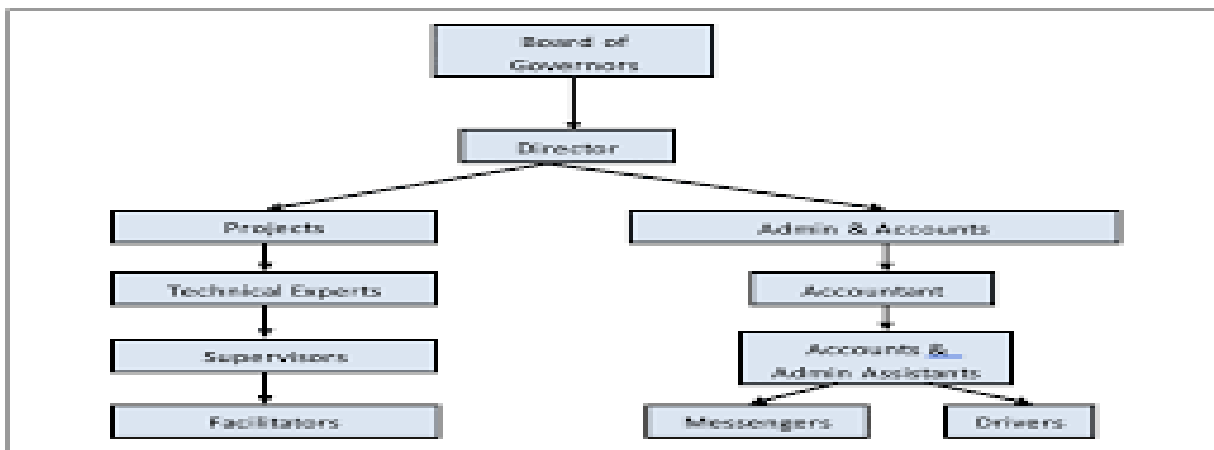

Scalability: Enhance the system's scalability to store and manage meeting records effectively.

Real-time Updates: Implement real-time updates on financial aid applications and meeting records for timely information dissemination and tracking.

This application will provide EduAid with a comprehensive solution for managing student financial assistance and meeting records, improving the efficiency and effectiveness of the organization's efforts in supporting financially backward students.

3.4 Details of Hardware & Software:

Software:

- Visual Studio Code
- HTML
- Tailwind CSS
- JavaScript

Hardware:

- 4 GB RAM or Higher
- 512 GB SSD or Higher
- 4 processor system or higher

3.5 Results:

3.6 Future Scope

- The EduAid system, integrating student financial assistance management and meeting record tracking, has promising avenues for future development:
- **Personalized Financial Aid Recommendations:**
Implement machine learning algorithms to generate personalized financial aid recommendations for students based on their financial need history, academic performance, and meeting records.
- **Real-Time Collaboration Enhancement:**
Enhance real-time collaboration features to allow staff and students to interact seamlessly, ensuring instant updates and communication.
- **Scalability:**
Enhance the system's scalability to accommodate a larger number of students efficiently, ensuring broader coverage and support.
- **Meeting Record Tracking:**
Develop detailed meeting record tracking, including date, participants, agenda, discussions, and action items, to improve the organization's ability to manage and monitor the support process effectively.
- **User Feedback Integration:**
Incorporate user feedback mechanisms to continuously improve the system's performance and adaptability to changing needs.
- **Mobile Application Development:**
Develop a mobile application version of the system to increase accessibility and convenience for users..

3.7 Conclusion

The EduAid system, integrating student financial assistance management and meeting record tracking, is an indispensable tool for supporting financially backward students effectively. This web-based application offers a user-friendly interface and intuitive functionalities, aimed at enhancing the efficiency and transparency of student support programs.

By employing machine learning algorithms, the system provides personalized financial aid recommendations, improving the accessibility and effectiveness of support. Additionally, the integration of real-time collaboration features ensures instant updates and interactions, enabling staff and students to communicate seamlessly.

With detailed meeting record tracking, including date, participants, agenda, discussions, and action items, the system enhances the organization's ability to manage and monitor the support process effectively.
